PROJECTS

samplesizecalc.com/calculator

July 2024

Test duration calculator for A/B testing with 1.4k+ monthly visitors at its peak; supports custom split ratios, multiple variants

stylesense.io

May 2022

Personal stylist web app with 2k+ daily visitors; ML facial analysis and color recommendations

SELECTED ESSAYS

Agents need work data

anjalishriva.com/work-data

Primer on how "work data" — traces of real human work — makes AI agents better and forces labs into product ownership.

Why fat tails emerge at scale

anjalishriva.com/fat-tails

Explanation of how cache pressure & batching affect pricing, capacity planning, and contracts

SKILLS

PROGRAMMING

Python • SQL • Javascript • Codex • Claude Code

STATISTICS AND MODELING

Causal Inference • Econometrics • Experimental Design • Pricing Models • Time Series Analysis • Revenue Forecast • LTV Modeling • Customer Profiling and Segmentation

EDUCATION

UC BERKELEY

BA IN DATA SCIENCE,

BS IN INDUSTRIAL

ENGINEERING AND

OPERATIONS RESEARCH

August 2017 - May 2021

Cum. GPA: 3.7 / 4.0

Major GPA: 3.9 / 4.0

ABOUT

Pricing data scientist with 6+ years of experience. I was a founding growth data scientist for Adobe's new products team, where I oversaw pricing for five different surfaces. I now research AI pricing full-time to develop measurement approaches for costs and value when both become more variable with usage. I've developed a POV on how SaaS monetization playbooks need to be updated and am eager to test against infrastructure-scale data.

EXPERIENCE

ANALOGUE GROUP | RESEARCHER, UNIT ECONOMICS MEASUREMENT

September 2025 - present | San Francisco, CA

- Built an experimentation framework for shared compute allocation (eg. caching, routing policies) to optimize unit economics; **Check it out at compute.anjalishriva.com!**
- Modeled inference cost distributions by reverse-engineering public pricing signals and known architectural constraints; presented analysis through an essay series and on **Live with Tim O'Reilly**
- Authoring a textbook on pricing for the AI age, which covers: a) how SaaS pricing strategies should be updated to account for unpredictable marginal costs, b) how to analyze marketplace dynamics of serving inference under shared compute constraints and c) theoretical computer science and proposed bandwidth pricing models from the '90s to inform early-stage mechanism design and value attribution

TANA | GTM DATA LEAD

March 2025 – September 2025 | San Francisco, CA

- Built the GTM measurement layer across Amplitude, Stripe, RevenueCat, Intercom, and BigQuery; defined funnel, retention, and revenue metrics for product and leadership reviews
- Partnered with leadership on growth questions under limited historical data and investigated retention signals for heterogeneous AI usage

ADOBE | FOUNDING MONETIZATION DATA SCIENTIST, ADOBE EXPRESS

July 2022 - March 2025 | San Jose, CA

- Designed and executed 60+ A/B tests cumulatively driving +\$7.6M in quarterly ARR and +250K MAU
- Led key 0→1 pricing and packaging initiatives across a portfolio of 5 products, including the launch of Adobe's first freemium Teams plan, discount campaigns and a paywall personalization model that contributed over \$600K in ARR
- Oversaw Adobe Podcast's shift to usage-based pricing model; phased rollout from winback campaign with churned users through new users to existing users to isolate metric impact

EARLIER EXPERIENCE

2019 - 2022

- Thermo Fisher Scientific | Data Scientist II (July 2021 - June 2022)
- Dataherald | Data Visualization Engineer (September 2020 - July 2021)
- elin.ai | Data Science Intern (September 2019 - December 2019)
- Intuit | Business Systems Analyst Intern (May 2019 - August 2019)
